

MOXIEDORI Compass Protractor™

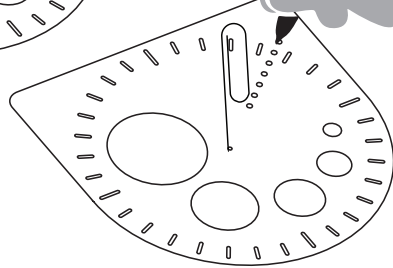

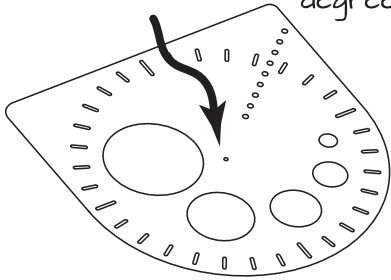

1.

Insert a mechanical pencil tip (no lead), an opened paper clip, or similar thin blunt tool into the center hole.

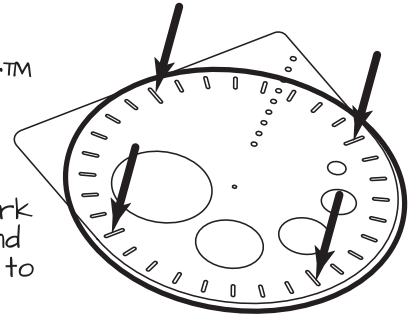

2.

Holding the center hole tool in place, insert your pen into one of the radius guides, and rotate the entire stencil a full 360 degrees to make a circle.

3.

With a pencil, lightly mark inside the guides around the stencil's perimeter to plan the number of divisions desired.

4.

Using the flat edge of the stencil, connect the pencil marks across the diameter of your circle, dividing it equally into the number of sections desired.
